From IT Silos to Seamless Operations

How Company Transformed IT Operations Management With NewRocket

The Customer

- **Company:** Company.com
- **Industry:** Hospitality
- **Location:** Global
- **ServiceNow Offering:** IT Operations Management (ITOM)

As one of the world's leading online travel platforms, Comapany connects millions of travelers with over 2.5 million properties in 85,000 destinations. Its success depends on a powerful, seamless tech infrastructure to keep listings updated, respond to customer needs, and ensure smooth operations across the business.

The Challenge

Company IT teams were operating in silos, each using different systems to track resources. This meant **leadership had an incomplete view of operations data**, creating process inefficiencies and difficulty in making informed business decisions.

In addition, its **IT asset tracking was limited**. The ServiceNow® platform's built-in tools couldn't fully capture all the resource types and attributes Comapany.com needed in its Configuration Management Database (CMDB), **making compliance and resource management complicated**.

The Solution

A Smarter, More Connected IT Infrastructure
NewRocket partnered with Company to implement a tailored solution that leveraged various ServiceNow ITOM tools to meet their unique needs. Here's how we made it happen:

01 | Comprehensive Discovery

NewRocket used multiple discovery methods to track and integrate all IT resources, including:

- **IP- and Agent-Based Discovery** to uncover resources across on-premises networks and data centers
- **CNO Kubernetes Discovery** to identify resources and dependencies in cloud-native applications
- **Custom Integrations and Bespoke Plugins** to populate the CMDB with resource types and attributes not supported by OOTB features

Through these methods, the CMDB became a unified and reliable source of truth, containing detailed information about IT assets, ownership, and compliance data.

02 | Enhanced Decision-Making with Dashboards

By creating custom dashboards within the CMDB, NewRocket gave Company's leadership real-time visibility into IT operations. Instead of wading through disconnected data, decision-makers could now see the full picture with clear, actionable insights for better decision-making.

03 | Smart, Agile Delivery

Rather than a long, drawn-out project, NewRocket took an agile approach, delivering incremental improvements while keeping the process transparent and collaborative.

Our methodology:

- 18 Objective Charters divided into 68 Epics and thousands of Stories
- Bi-weekly sprints to foster continuous accountability and reporting
- Daily Scrums to track progress and ensure alignment
- Weekly releases deployed to deliver incremental value and allow for quick adaptations

The Results

Company's IT operations saw a complete transformation with results like:

- Comprehensive, real-time IT visibility through a unified CMDB
- Faster IT asset tracking and compliance monitoring
- 96% Epic completion rate thanks to an effective implementation and progress tracking
- Enhanced reporting across IT for better planning and resource optimization
- Scalable infrastructure with ServiceNow ITOM tools equipped to support growth
